- No formation of corrosive gases
- Low smoke density
- Very good weather resistance

Note

- AWG sizes are approximate equivalent values. The actual cross-section is in mm².

Application

FZ-LSi, blue

This ignition cable is suitable for use at high and extremely alternating temperatures up to +180°C and also for motor vehicle sector. As protection against mechanical damages a glass fibre braiding and a silicone sheath covers the core insulation.

FZ-LS, red

This ignition cable is suitable for use at high and extremely alternating temperatures up to +180°C and also for motor vehicle sector.

Neon-light-cable, yellow

This neon-light-cable for fluorescent tubes is suitable for use at high and extremely alternating temperature up to +180°C. The main application of this cable is in the lamp and lightning industry, as floodlights, industrial lights, suspended and stand lamps. This cable must be protected in steel tubes or flexible steel tubes made of steel taps before touching plaster.
