
Spiral Cables

The use of spiral cables will be necessary in almost all market segments. Whether communication (telephone, radio) or medicine technologie, motor vehicle industry, mechanical engineering etc. or as feeder in lamp industry spiral cables are applicated everywhere. Apart from the electric-mechanical advantage, spiral cables are often an excellent optic structural solution.

If your use PVC or PUR cables, the colour of the feeder may mostly be brought into line with the object. Even copper screened cables are available.

PVC spiral cables:
low mechanical and chemical load rating, middle retraction force.

PUR spiral cables:
The optimal solution, in most areas of application. Chemically, mechanically, thermaly and optically (different colours) excellent. Very good retraction force.

Neoprene spiral cables:
The most robust feeder. Available only in black. Very good retraction force.
